ABOUT

Hi! I'm Daniela Marin, a student at NYU majoring in Integrated Design and Media with a minor in Psychology. Creativity has always been at the core of who I am--whether through drawing, crocheting, baking, or photography. I never knew how to channel my passion for visual storytelling into a career until I started exploring marketing strategy, advertising, UX/UI Design, and graphic design.

My goal is to create meaningful experiences and visuals that connect people with brands and ideas. I'm passionate about designing intuitive user experiences, creating impactful marketing strategies, and building user-friendly apps and visuals that drive meaningful initiatives. I'm constantly learning and evolving, and this website serves as a glimpse into my journey as a designer.

CODE I LEARNED

TUTORIAL I FOUND FOR CAROUSEL FEATURE FOR PHOTOGRAPHS~ CSS

- **Started by** making HTML list with items that would function as my carousel wrapper and carousel items
- The .carousel container holds all images and prevents them from overflowing
- .carousel__wrapper moves all the slides left or right based on the selected radio button
- Scroll-snap-type: x mandatory; makes sure all images align when scrolling
- Navigation dots (.carousel_nav) allow users to manually move through the images
- The input selectors (radio buttons) change the transform: translateX() property which moves images left/right to stimulate sliding→ horizontal movement→ slide transitions

```css
/* Carousel Container */
.carousel {
  position: relative;
  width: 90%; /* keeps carousel smaller */
  max-width: 800px; /* prevents images from getting too large */
  margin: 50px auto;
  overflow: hidden;
  border-radius: 10px;
}

/* Wrapper for Images */
.carousel__wrapper {
  display: flex;
  width: 1400%; /* adjusts for 14 images */
  transition: transform 0.6s ease-in-out;
  scroll-snap-type: x mandatory;
  will-change: transform;
  backface-visibility: hidden;
  transform: translate3d(0, 0, 0);
}

.carousel__slides {
  display: flex;
  overflow: hidden;
  position: relative;
  white-space: nowrap;
  scroll-snap-type: x mandatory;
  scroll-behavior: smooth;
}
```
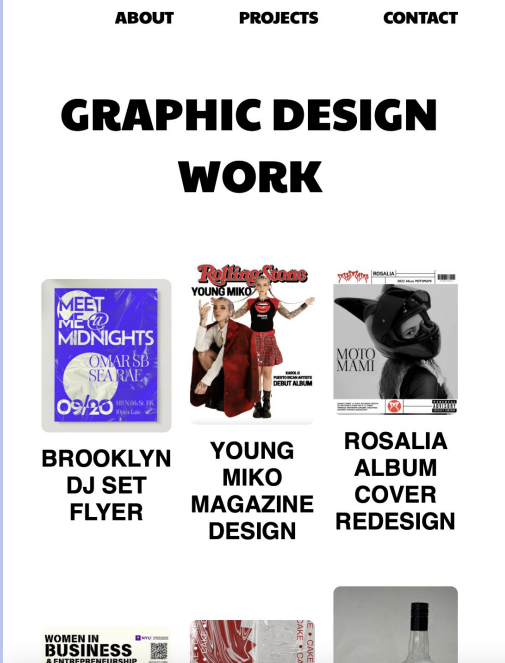

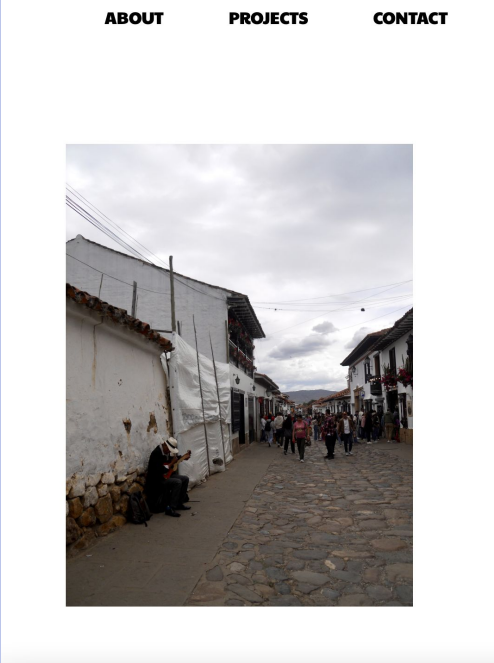

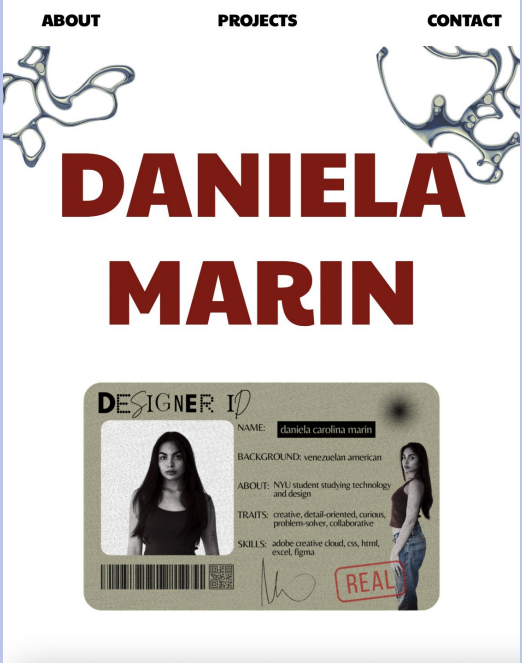

CODE I LEARNED

ID CARD FLIP ANIMATION
- Transition: all makes sure any changes in the element are animated smoothly
- Transform: rotateY(180deg) flips the card horizontally

```css
.id-card {
    width: 550px;
    transition: all 0.4s ease-in-out;
    margin: 20px 0;
    z-index: 6;
}

.id-card:hover {
    transform: rotateY(180deg);
}
```

NEXT STEPS

- Easier and more Functional Photo Swipe Method with Javascript
- JS animations when scrolling
- A more functional and cooler media query that closely resembles the full size homepage
- Adding in motion and videos to make it more interactive
- More project sections
